

OwlMed: Patient Encounter Tracking (Student)

Marcelle Gornitsky - 2025-07-31 - OwlMed and Canvas

Patient Encounter Tracking Tutorial for Students

For information about reviewing your submitted entries, please skip to approximately [2:07](#).

The **Patient Encounter Tracking (PET)** is a tool for Students to log their clinical encounters with patients.

- Students are able to enter basic information about their patient, procedures that were done during the encounter, observed patient conditions, duty hours, etc.
- The data fields are configurable by the institution.
- The instructor is then able to collect the student **PET** entries and use them for grading purposes.

Student Access of PET Tab

Students can access the PET from the home screen or landing page.

Existing PET entries will be displayed in a list. Select the Section link to navigate directly to the Section in which the record is associated.

The screenshot shows the LEO system interface. At the top, there is a navigation bar with 'Calendar', 'Courses', 'PET' (highlighted), and 'Search'. Below this, the 'PET' section is visible, with buttons for 'Add Patient Encounter' and 'Add Duty Hours'. Underneath, it says 'Previous Records for Simon Student'. There is a 'View' dropdown and an 'Options' dropdown. A table displays the records, with columns for Encounter Date, Section, Diagnoses, Procedures, Edit Record, Created, DOB/Age, Sex, Ethnicity, and Location. The first record is dated 2022-01-19, for the section '(3rd) Third Year Elective 2021-2022 R12 - North Carolina Medical College (SOM)', with diagnoses 'Chest Pain' and procedure 'ECG lead placement'. An orange arrow points to the 'Section' link in this record.

Encounter Date	Section	Diagnoses	Procedures	Edit Record	Created	DOB/Age	Sex	Ethnicity	Location
2022-01-19	(3rd) Third Year Elective 2021-2022 R12 - North Carolina Medical College (SOM)	Chest Pain	ECG lead placement	Edit	2022-01-20 13:45:21	40-64 years	Female
